Marwadi University

Faculty of Computer Applications

Enrolment No:	**92500566013**		
Student Name:	**Shaikriyana**		
Subject	**DBMS-ii**	**Academic Year**	**2025-2026**
Subject Code	**05DS0204**	**Subject Type**	**Central Level**

Index

Sr. no	**Details**	**Submission Date**
1	Write a simple procedure without any parameter that shows user defined message on the screen. Call the procedure using separate PL/SQL block and on the command line.	07-04-26
2	Write a simple procedure that increases the basic salary of employees for the given department no by percentage inputted by the user using IN parameter.	07-04-26
3	Write a procedure that search's whether the given employee id is present or not in the table. If employee is found then show its name otherwise raise appropriate error message (Use both IN and OUT mode variables) and also write a PL/SQL block to call the procedure.	07-04-26
4	Write a function that returns the cube of the given number. Execute the function using separate PL/SQL block and on the command line.	07-04-26
5	Write a function that returns balance for given account number. (Create ACCOUNT table with ACNO, CNAME, BNAME, BALANCE columns using appropriate datatypes)	07-04-26
6	Write a PACKAGE which includes Package Declaration, Package Body and call the individual object from the Package.	07-04-26

Definition 1:

Write a simple procedure without any parameter that shows user defined message on the screen. Call the procedure using separate PL/SQL block and on the command line.

```
set serveroutput on
create or replace procedure msg
IS

Begin
        dbms_output.put_line('Welcome!');
end msg;
/
```

Definition 1 : (calling program)

```
set serveroutput on
begin
        msg;
end;
/
```

Definition 2:

Write a simple procedure that increases the basic salary of employees for the given department no by percentage inputted by the user using IN parameter.

```
create or replace procedure pro_def2(xdeptno
IN number,xper IN number)
is
begin
update emp set BASICSAL=BASICSAL +
(BASICSAL * (xper/100)) WHERE
DEPTNO=xdeptno;
commit;
end pro_def2;
/
```

Definition 3:

Write a procedure that search's whether the given employee id is present or not in the table. If employee is found then show its name otherwise raise appropriate error message (Use both IN and OUT mode variables) and also write a PL/SQL block to call the procedure.

```
create or replace procedure pro_def3(xeid IN
number,xenm OUT char)
IS
BEGIN
select ename INTO xenm from emp where
EID=xeid;
Exception
WHEN NO_DATA_FOUND THEN
dbms_output.put_line('inputted eid is not
exists in emp table');
end pro_def3;
/
```

Definition 3: (calling program)

```
set serveroutput on
declare
id number:=&id;
nm char(20);
begin
pro_def3(id,nm);

dbms_output.put_line('Employee
Name:='||nm);
end;
/
```

Definition 4:

Write a function that returns the cube of the given number. Execute the function using separate PL/SQL block and on the command line.

```
create or replace function fun_def4(x in number,ans out number) Return number
is
begin
ans:=x * x * x;
return ans;
end fun_def4;
/
```

Definition 4: (calling program)

```
declare
c number:=&c;
mycube number;
begin
mycube:=fun_def4(c,mycube);
dbms_output.put_line(mycube);
end;
/
```

Definition 5:

Write a function that returns balance for given account number. (Create ACCOUNT table with ACNO, CNAME, BNAME, BALANCE columns using appropriate datatypes)

```
create or replace function fun_Bal
(xacno IN number) RETURN NUMBER
IS
bal number;
begin
select balance INTO bal from account
where acno=xacno;
return bal;
end fun_Bal;
/
```

Definition 5: (calling program)

```
declare
ano number:=&ano;
amt number;
begin
amt:=fun_Bal(ano);
dbms_output.put_line(amt);
end;
/
```

Definition 6:

Write a PACKAGE which includes Package Declaration, Package Body and call the individual object from the Package.

```
CREATE OR REPLACE PACKAGE BODY student_pack AS

  PROCEDURE add_student(p_id NUMBER, p_name VARCHAR2) IS
  BEGIN
    INSERT INTO student VALUES (p_id, p_name);
    DBMS_OUTPUT.PUT_LINE('Student Added Successfully!');
  END add_student;

  PROCEDURE show_student(p_id NUMBER) IS
    v_name student.name%TYPE;
  BEGIN
    SELECT name INTO v_name
    FROM student
    WHERE id = p_id;

    DBMS_OUTPUT.PUT_LINE('Student Name: ' || v_name);

  EXCEPTION
    WHEN NO_DATA_FOUND THEN
      DBMS_OUTPUT.PUT_LINE('No student found with this ID');
  END show_student;

END student_pack;
/
```

Definition 6: (calling program)

```
BEGIN
  student_pack.add_student(1, 'Zahra');
END;
/
-- Display the student
BEGIN
  student_pack.show_student(1);
END;
/
```
